Lab 01 — Prompt-to-Image Visual Brief

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A reading campaign needs an imaginative hero image with clear copy space for a social tile.

Objective

Translate an audience brief into a controlled Firefly prompt set and selected visual direction.

Supplied Photoshop/JPEG files

- dog-reading-reference.jpg
- firefly-model-reference.jpg

Detailed procedure

1. Create a folder named working and preserve the supplied JPEGs unchanged.

2. Write a one-sentence brief naming audience, message, channel, aspect ratio and required copy space.

3. Draft a baseline prompt using subject, action, setting, visual treatment, composition and lighting.

4. Generate a first set in Firefly and record the model and content type used.

5. Change only one prompt factor for iteration two; label the changed factor.

6. Change a different single factor for iteration three; retain all three prompt/result records.

7. Compare the candidates for hierarchy, copy space, artefacts, audience fit and rights/provenance.

8. Export the selected candidate as lab01-selected.jpg and save lab01-decision-log.txt.

Evidence to retain

Three prompt/result records, selected JPEG and decision log identifying A1 exploration and A2 integration decisions.

Acceptance criteria

- ■ At least three controlled prompt iterations are retained.
- ■ The selected JPEG has a clear focal point and intentional copy space.
- ■ The log records model, prompt, selection reason and provenance consideration.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
