Lab 03 — Composition and Style References

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A wellness campaign needs varied subjects that retain one composition and art direction.

Objective

Create a controlled Firefly comparison using composition and style references independently and together.

Supplied Photoshop/JPEG files

- composition-reference.jpg
- style-reference.jpg

Detailed procedure

1. Confirm the supplied references are used only for this authorised learning activity.

2. Write one subject prompt and generate a baseline without references.

3. Add composition-reference.jpg, select a moderate strength and generate a second set.

4. Remove the composition reference, add style-reference.jpg and generate a third set.

5. Apply both references and generate a fourth set without changing the core subject prompt.

6. Export one candidate from each condition using descriptive filenames.

7. Create a four-up comparison canvas in Photoshop with editable labels.

8. Record which setting best controlled structure, treatment and campaign consistency.

Evidence to retain

Four labelled JPEG conditions, comparison PSD and a reference-control decision note.

Acceptance criteria

- ■ Baseline, composition-only, style-only and combined results are present.
- ■ Only the intended reference condition changes between comparisons.
- ■ Decision note distinguishes structural and stylistic influence.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
