Lab 04 — Storyboard and Task Flow

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A fictional Wellness Week Singapore 2026 campaign needs a short visual journey from stress to restorative action.

Objective

Build a five-frame Firefly storyboard and a team task flow that communicates intent and ownership.

Supplied Photoshop/JPEG files

- storyboard-reference.jpg
- storyboard-starter.psd

Detailed procedure

1. Save the PSD as lab04-storyboard.psd and inspect its editable frame structure.

2. Write five beats: opening, context, action, transformation and outcome/CTA.

3. Define a shared palette, lighting direction, aspect ratio and style reference for the sequence.

4. Generate one candidate for each beat, keeping the documented shared controls constant.

5. Place each candidate in its own Smart Object frame and add editable captions.

6. Create a task-flow panel naming owner, input, action, review gate and output for generation, Photoshop edit and approval.

7. Review continuity of subject, palette, lighting and causal sequence with a peer.

8. Revise one frame, record the reason and export lab04-storyboard.jpg.

Evidence to retain

Five-frame layered storyboard PSD, exported JPEG, task-flow panel and peer-review note.

Acceptance criteria

- Every frame has a purpose and transition caption.
- Task flow includes ownership and an approval gate.
- At least one revision is traceable to stakeholder or peer feedback.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
