Lab 06 — Background Replacement and Harmonize

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A portrait must be adapted into an outdoor campaign visual while remaining editable.

Objective

Generate a new background, integrate a placed element and evaluate lighting, perspective and contact.

Supplied Photoshop/JPEG files

- park-bench.jpg
- photoshoot-start.psd

Detailed procedure

1. Open the starter PSD and save lab06-harmonize.psd.

2. Inspect subject isolation and refine the mask around hair, clothing and contact edges.

3. Generate a background that provides compatible camera height, light direction and copy space.

4. Place park-bench.jpg as a Smart Object and remove its original background non-destructively.

5. Scale and position the bench using perspective and believable subject relationship.

6. Use Harmonize where available, outputting to an editable layer; otherwise use clipped adjustment layers.

7. Add or refine contact shadow and compare before/after at Fit and 100%.

8. Export lab06-final.jpg and record the critique criteria used.

Evidence to retain

Layered PSD, final JPEG, before/after comparison and criterion-based integration note.

Acceptance criteria

- ■ Subject and placed element masks remain editable.
- ■ Light, perspective and contact shadow are visually coherent.
- ■ The note evaluates at least four explicit aesthetic/technical criteria.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
