Lab 07 — Generative Expand for Channel Ratios

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A campaign hero must work across social, presentation and mobile-story channels.

Objective

Extend one master visual into square, landscape and portrait variants without losing hierarchy.

Supplied Photoshop/JPEG files

- koala-start.psd
- landscape-start.jpeg

Detailed procedure

1. Open koala-start.psd, save lab07-master.psd and identify protected subject pixels.

2. Create a square 1:1 variant with Generative Expand and intentional copy space.

3. Create a 16:9 landscape variant, adjusting the anchor to protect the focal point.

4. Create a 9:16 portrait variant with adequate top and bottom safe areas.

5. Retain at least two variations for any ratio with repeated objects or seams.

6. Inspect edges, repeated textures and subject anatomy at 100%.

7. Add non-destructive cleanup layers only where required.

8. Export lab07-square.jpg, lab07-landscape.jpg and lab07-portrait.jpg.

Evidence to retain

Master PSD plus three channel JPEGs and a ratio-by-ratio verification checklist.

Acceptance criteria

- ■ All three aspect ratios are delivered.
- ■ Focal hierarchy and protected subject details remain intact.
- ■ No visible seams or repeated artefacts remain at 100%.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
