Lab 08 — Reference Image and Multi-Prompt Composition

Generative AI (GenAI) Visuals in Photoshop and Firefly

TGS-2024045220 · Version 7 · 21 August 2026

Course: Generative AI (GenAI) Visuals in Photoshop and Firefly (TGS-2024045220)

Version: v7 · 21 August 2026

Scenario

A fashion visual requires an altered garment treatment that follows a supplied material reference.

Objective

Use a permitted reference image and staged selections to construct a coherent multi-element composition.

Supplied Photoshop/JPEG files

- coat-start.psd
- garment-reference.jpeg

Detailed procedure

1. Open coat-start.psd, save lab08-reference-image.psd and inspect existing masks.

2. Record the supplied reference filename and authorised learning-use context.

3. Select only the garment region, preserving face, hands and background.

4. Invoke Generative Fill with garment-reference.jpeg as the reference and a concise material/colour prompt.

5. Review variations for garment boundary, folds, lighting and identity preservation.

6. Create a second isolated selection for one supporting accessory or background detail.

7. Critique the result using description, interpretation, evaluation and recommendation; make one traceable revision.

8. Export lab08-final.jpg and save the critique as lab08-critique.txt.

Evidence to retain

Layered reference-guided PSD, final JPEG, rights note and four-part critique with revision.

Acceptance criteria

- ■ Protected identity and background regions remain unchanged.
- ■ Reference asset and selected variation are retained with the PSD.
- ■ The critique leads to one visible, traceable improvement.

Reflection prompts

- Which decision most improved the message or focal hierarchy?
- How does the Layers panel prove that the workflow remains editable?
- What rights or provenance evidence must accompany the finished image?
